

Schwab Trading Bot

Full System Summary

Generated 2026-07-02 14:27:54 EDT

30-day soak is ready / A; safe_to_leave_unattended=True.

BOT_LOGS is mounted and routed: ready with 170.1 GB free and 59.1 GB 30-day margin.

Livefeed is ready in supervised_local_mirror mode.

Current caveat: platform plumbing is blocked because runtime memory is elevated under two-system host load.

Live money remains locked/not authorized by this soak report.

Status Board

Area	Current State	Grade/Score	Blockers	Notes
30-day soak	ready	A / 95.3	None	Safe unattended: True
Storage	ready / A+	Margin 59.1 GB	None	Required 111.0 GB; free 170.1 GB
Ingestion route	ready / ready	Pressure 0.0	None	Soak-ready True; efficiency A+
Platform plumbing	blocked	Score 80	runtime memory	external drain advisory, SQL overlay advisory
Runtime throttle	degraded	Host 71.4	host pressure	Compute elevated; memory elevated
Memory intelligence	advisory	compression_relief	compression gate, runtime profile	Free %; swap GB; compressed GB
Livefeed	ready	ok	None	local_mirror / supervised_local_mirror
Auth	ready	ok	None	Schwab auth supervisor ready
Paper profitability	ready	A	None	Basis raw_paper_outcome
Paper execution truth	blocked	Score 94.1	None	Still paper-only; blocked status is not live authorization.
Low-grade blockers	ready	A+	Active 0	Effective low 0; raw preserved 736
Process watchdog	ready	clean	Alerts 0	Restart storms 0

Storage And BOT_LOGS

Mount	Exists	Total	Free	Used %
/Volumes/BOT_LOGS	yes	931 GB	170 GB	81.7%
/Volumes/VIDEO	yes	931 GB	799 GB	14.2%
/Users/dankingsley/PycharmProjects/schwab_trading_bot	yes	926 GB	234 GB	74.7%

BOT_LOGS recovered from the transient eject event. Route verification is ready, coverage is 3/3, no route mismatches are reported, and storage pressure is zero. The storage plane remains in bounded raw compaction mode with training and expansion intentionally held while raw/deep-cold evidence is managed.

Runtime Co-Tenant Caveat

Current top pressure source is the separate co-tenant system: tone_capture_engine.py at about 87.7% CPU. It is treated as intentional host load, not a Schwab bot failure.

Because you confirmed a second system is running on the same Mac, this report classifies the current runtime-memory/plumbing caveat as host co-tenant pressure. The Schwab bot storage, route, livefeed, auth, and process watchdog lanes are healthy; pure-green plumbing will require either cooling the other system or waiting for macOS compression pressure to settle.

Current Needs

Blocker	Source	Risk	Next Command
memory_compression_or_swap_above_widening_gate	memory_pressure_intelligence	low	./scripts/ops/opsctl.sh memory-pressure-intelligence --apply --json
runtime_memory_profile_needs_refresh	memory_pressure_intelligence	low	./scripts/ops/opsctl.sh runtime-throttle --apply --json
platform_plumbing_repair_needed	system_plumbing_control	low	./scripts/ops/opsctl.sh system-plumbing-control --json

Operating Guidance

- Keep live money locked during the soak. This report is soak readiness, not live-money authorization.
- Leave BOT_LOGS attached; reconnect/eject guards are installed and route verification is healthy.
- Avoid running heavy report generation, training, or the second system at full load when you want a pure-green Schwab bot plumbing check.
- Daily check-in is enough if livefeed, mobile operator coverage, and BOT_LOGS mount state remain ready.
- Let storage gather more slope history; current storage-growth baseline watch is non-blocking.

Source Artifacts

Artifact	Age	Purpose
unattended_soak_readiness_latest.json	3.5m	30-day soak readiness
ingestion_storage_control_latest.json	3.4m	storage, route, backlog, and soak contract
system_plumbing_control_latest.json	3.5m	full plumbing gate and current caveat
runtime_throttle_control_latest.json	38s	host pressure, process classes, and throttle policy
memory_pressure_intelligence_latest.json	34s	memory compression/swap gate
livefeed_refresh_guard_latest.json	4.8m	remote livefeed health
auth_lease_manager_latest.json	54s	broker/auth lease health
schwab_auth_supervisor_latest.json	54s	Schwab token supervisor
paper_profitability_control_latest.json	4.6m	paper profitability grade
paper_execution_truth_layer_latest.json	4.6m	paper truth score
low_grade_finalizer_latest.json	95.1m	low-grade blocker finalization
system_needs_intelligence_latest.json	35s	active repair/attention queue
